TECHNICAL BUILDINGS

CUSTOM CONCEPTS FOR THE TOUGHEST ENVIRONMENTS.

Our in-house engineering and manufacturing resources give us the capability to provide a customized solution in the most challenging environments in the oil and gas industry. Whether blast rated, fire rated or non-rated, Specialist Services RedGuard has the ability to design a solution to securely house process-critical electrical equipment. We can provide a turnkey or split scope solution with in-house engineering, design, fabrication and integration. Our capabilities and project experience include E-Houses, Electrical Skids, Control Rooms, Local Equipment Rooms, Substation Modules, and others.

ROBUST AND RELIABLE BUILDINGS

All of our projects are designed to provide longevity and low maintenance service in the most demanding locations while meeting the necessary safety requirements for offshore use. In the event of an emergency, you can be assured that your equipment is in a building designed to comply with industry specific, class leading specifications to protect it from the potential outcome of an on-site fire, explosion or seismic event. Supplied to your site as a fully connected and tested package, our solutions minimize the scope of work required onsite for installation and commissioning.
